Frey S, Sumner RW (2019)  
Emergence of integrated  
institutions in a large population  
of self-governing communities.  
PLoS ONE 14(7): e0216335.  
<http://doi.org/c76k>

WITH ONLINE COMMUNITIES  
COMPUTATIONAL SOCIAL  
SCIENTISTS CAN TEST  
GENERAL PRINCIPLES OF  
INSTITUTION DESIGN AND  
PERFORMANCE

# The model organism

- *"Online behavior isn't real"*
- *"Lessons from online don't transfer"*
- *"Structure of online communities is specific to the Internet"*

# The model organism

- *Drosophila melanogaster* for gene expression
- *Mus musculus* for medicine
- Online communities for institutional and organizational processes

# The core unit

- Cell biologists study many cells.
- Psychologists study many individuals
- Why doesn't a social scientist primarily study many societies?

# Why online communities?

(or other "engineered social systems")

- **"Societal" Unit of Analysis**
- "Real" "people"
- Simplified environment
- Multi-level data (Individual-, Social-, Pop-)
- General enough
- High Motivation
- Clear Goals
- Selection on Performance

General enough

## r/TeensSupportTeens Rules

1. No NSFW Posts
2. Flair Yourself before Posting and Commenting
3. Remain Respectful of Others' Opinions
4. No Spamming
5. LGBT+ Safe Zone
6. No Suicide and Self-Harm Related Posts
7. No Repetitive Daily Posts
8. No Posting and Encouraging Drugs, Smoking, Alcohol, or Vaping

## r/ModSupport Rules

1. No reporting rule violations or ban appeals  
Please send all rule violations and appeals to us [via the appropriate report form](#). Posts or comments reporting these topics may be removed.
2. No calling out other users or subreddits  
Posts or comments calling out other users or subreddits may be removed. If you need to discuss something sensitive in nature about another user or community, please send a [modmail to /r/ModSupport](#).
3. No insults or uncivil behavior  
Please keep posts and comments free of personal attacks, insults, or other uncivil behavior.
4. No off-topic posts

## r/Showerthoughts Rules

1. All content must be original and unique.  
Submissions that match (or echo similar sentiments to) ideas offered by other people will be removed, regardless of whether or not those ideas have appeared on Reddit. Blatant reposting and plagiarism may result in a ban.»
2. All posts must be showerthoughts.  
Personal perspectives, crazy ideas, questions (rhetorical or otherwise) and meta submissions are not showerthoughts, and would be better suited to other subreddits. For an in-depth explanation of what a showerthought actually is (and is not), please read [this page](#).
3. Your entire thought must be in the title.  
You may include examples, explanations, or further information in

"open, respect and collaborate"

—Shaofeng Shi, 15 year user of Apache Tomcat, Kylin, Hadoop, Spark, Kafka, MyBatis, HBase, Flink, contributor to Apache Kylin, Superset, Spark

## WHAT MAKES THE APACHE WAY SO HARD TO DEFINE?

The Apache Way is a living, breathing interpretation of one's experience with our community-led development process. Apache projects and their communities are unique, diverse, and focused on the activities needed at a particular stage of the project's lifetime, including nurturing communities, developing great code, and building awareness. What is important is that they embrace:

- **Earned Authority:** all individuals are given the opportunity to participate, but their influence is based on publicly earned merit – what they contribute to the community. Merit lies with the individual, does not expire, is not influenced by employment status or employer, and is non-transferable (merit earned in one project cannot be applied to another). [More on merit](#).
- **Community of Peers:** individuals participate at the ASF, not organizations. The ASF's flat structure dictates that roles are equal irrespective of title, votes hold equal weight, and contributions are made on a volunteer basis (even if paid to work on Apache code). The Apache community is expected to treat each other with respect in adherence to our [Code of Conduct](#). Domain expertise is appreciated; Benevolent Dictators For Life are disallowed. [More on individual participation](#).
- **Open Communications:** as a virtual organization, the ASF requires all communications related to code and decision-making to be publicly accessible to ensure asynchronous collaboration, as necessitated by a globally-distributed community. Project mailing lists are archived, publicly accessible, and include:
  - dev@ (primary project development)
  - user@ (user community discussion and peer support)
  - commits@ (automated source change notifications)
  - occasionally supporting roles such as marketing@ (project visibility)

...as well as restricted, day-to-day operational lists for Project Management Committees. Private decisions on code, policies, or project direction are disallowed; off-list discourse and transactions must be brought on-list. More on [communications](#) and the [use of mailing lists](#).

- **Consensus Decision Making:** Apache Projects are overseen by a self-selected team of active volunteers who are contributing to their respective projects. Projects are auto-governing with a heavy slant towards driving consensus to maintain momentum and productivity. Whilst total consensus is not possible to establish at all times, holding a vote or other coordination may be required to help remove any blocks with binding decisions, such as when declaring a release. [More on decision making and voting](#).
- **Responsible Oversight:** The ASF governance model is based on trust and delegated oversight. Rather than detailed rules and hierarchical structures, ASF governance is principles-based, with self-governing projects providing reports directly to the Board. Apache Committers

# Apache Software Foundation Incubator (ASFI)

- Founded by Apache Software Foundation in 2002
- Mentored over 300 projects
- Projects are autonomous in development and community specifics
- Incubator regulates administration, licensing, infrastructure, branding and production standards

# Apache Software Foundation Incubator (ASFI)

- Founded by Apache Software Foundation in 2002
- Mentored over 300 projects
- Projects are autonomous in development and community specifics
- Incubator regulates administration, licensing, infrastructure, branding and production standards

different asf projects have different policies. the important part is that we should have a common understanding about our commit policy. there might e.g. be a branch for the next release where rtc (review then commit) is applied. that's useful when preparing a release or for maintenance releases we still actively maintain. and beside that we might have a 'future' branch (e.g. on master) or multiple feature branches where ctr (commit then review) is standard. most asf projects have the whole repo on ctr...

# Research Question

- How do foundation policies relate to project operations and performance?

# Research Question

- How do foundation policies relate to project operations and performance?
  - What is the relationship of *rules-in-form* and *rules-in-use*?
- Does formalization relate to extent of structured operations?
- How much do members internalize formal regulation?
- Do governed activities and policy internalization relate to project outcome?

# Data

- ASF incubator policies (Sen et al, 2022).
  - About 250 sentences
- Developer emails of 208 projects scraped from public ASFI mailing list archives (Yin et al, 2021)
  - About 2M sentences from 700,000 emails
- Project covariates: development scale and membership (Stănciulescu et al, 2022)
  - Active committers
    - Number of commits
    - Lines of code contributed
  - Total time in incubation

# Governance practice

**Original Policy:**

'After a vote has finished, the ipmc must send a notice email to the board and then wait for 72 hours before inviting the proposed member'

**Semantic Role Parsing:**

'ARG0': ['the ipmc'], 'ARGM-MOD': ['must'], 'V': ['send'], 'ARG1': ['a notice'], 'ARGM-DIR': ['email'], 'ARG2': ['to the board'], 'ARGM-TMP': ['after a vote has finished']

'ARG1': ['the ipmc'], 'ARGM-MOD': ['must'], 'V': ['wait'], 'ARGM-TMP': ['after a vote has finished', 'then', 'for 72 hours', 'before inviting the proposed member']

**Performance Programs (After reconstitution):**

'After a vote has finished the ipmc must send a notice email to the board'

'After a vote has finished the ipmc must then wait for 72 hours before inviting the proposed member'

Table 1: Activities from compound sentences through Semantic Role Labeling (SRL). ARG0 denotes agent, ARG1-ARG5 are direct/indirect objects, ARG-MOD indicate modals while ARG-TMP and ARG-DIR are the temporal and directional arguments respectively

**Original Sentence:**

'( 1 ) I'll be away from my computer starting Friday and through the New Year, so I won't be able to do much to help if folks want to release 2.1 during that time ( not even testing ).' (Apache Roller, 12/21/2005)

**After SRL and reconstitution:**

'I'll be away from my computer starting Friday and through the New Year' (Schedules/Events)

I won't be able to do much to help if folks want to release 2.1 during that time ( not even testing )'  
(Release Management)

Table 2: Capturing granularity: Sentences spanning multiple, thematically distinct operations. In this example, a developer shares their vacation timeline to the community in general, while also discussing implications for a tentative release. Topics indicated for each activity are inferred as described in Section 5.3.3

# Institutional grammar

| Policy  | Attribute                  | Object   | Deontic | Aim                           |
|---|----------------------------|--|---------|-------------------------------|
| Each podling in incubation must report to the incubator pmc .   | each podling in incubation | pmc  | must    | report                        |
| A mentor must be an ipmc member   | a mentor                   | an ipmc member                                     | must    | be                            |
| IPMC members are free to volunteer to mentor a podling . to do so , they should mail the podling stating their intentions | ipmc members are free      | a podling to do, the podling stating their         | should  | to volunteer to mentor, mail  |
| It 's also good to encourage developers by suggesting new related work they may like to volunteer to work on              | —                          | developers, new related work, like to volunteer to | may     | good to encourage, suggesting |

# Pipeline

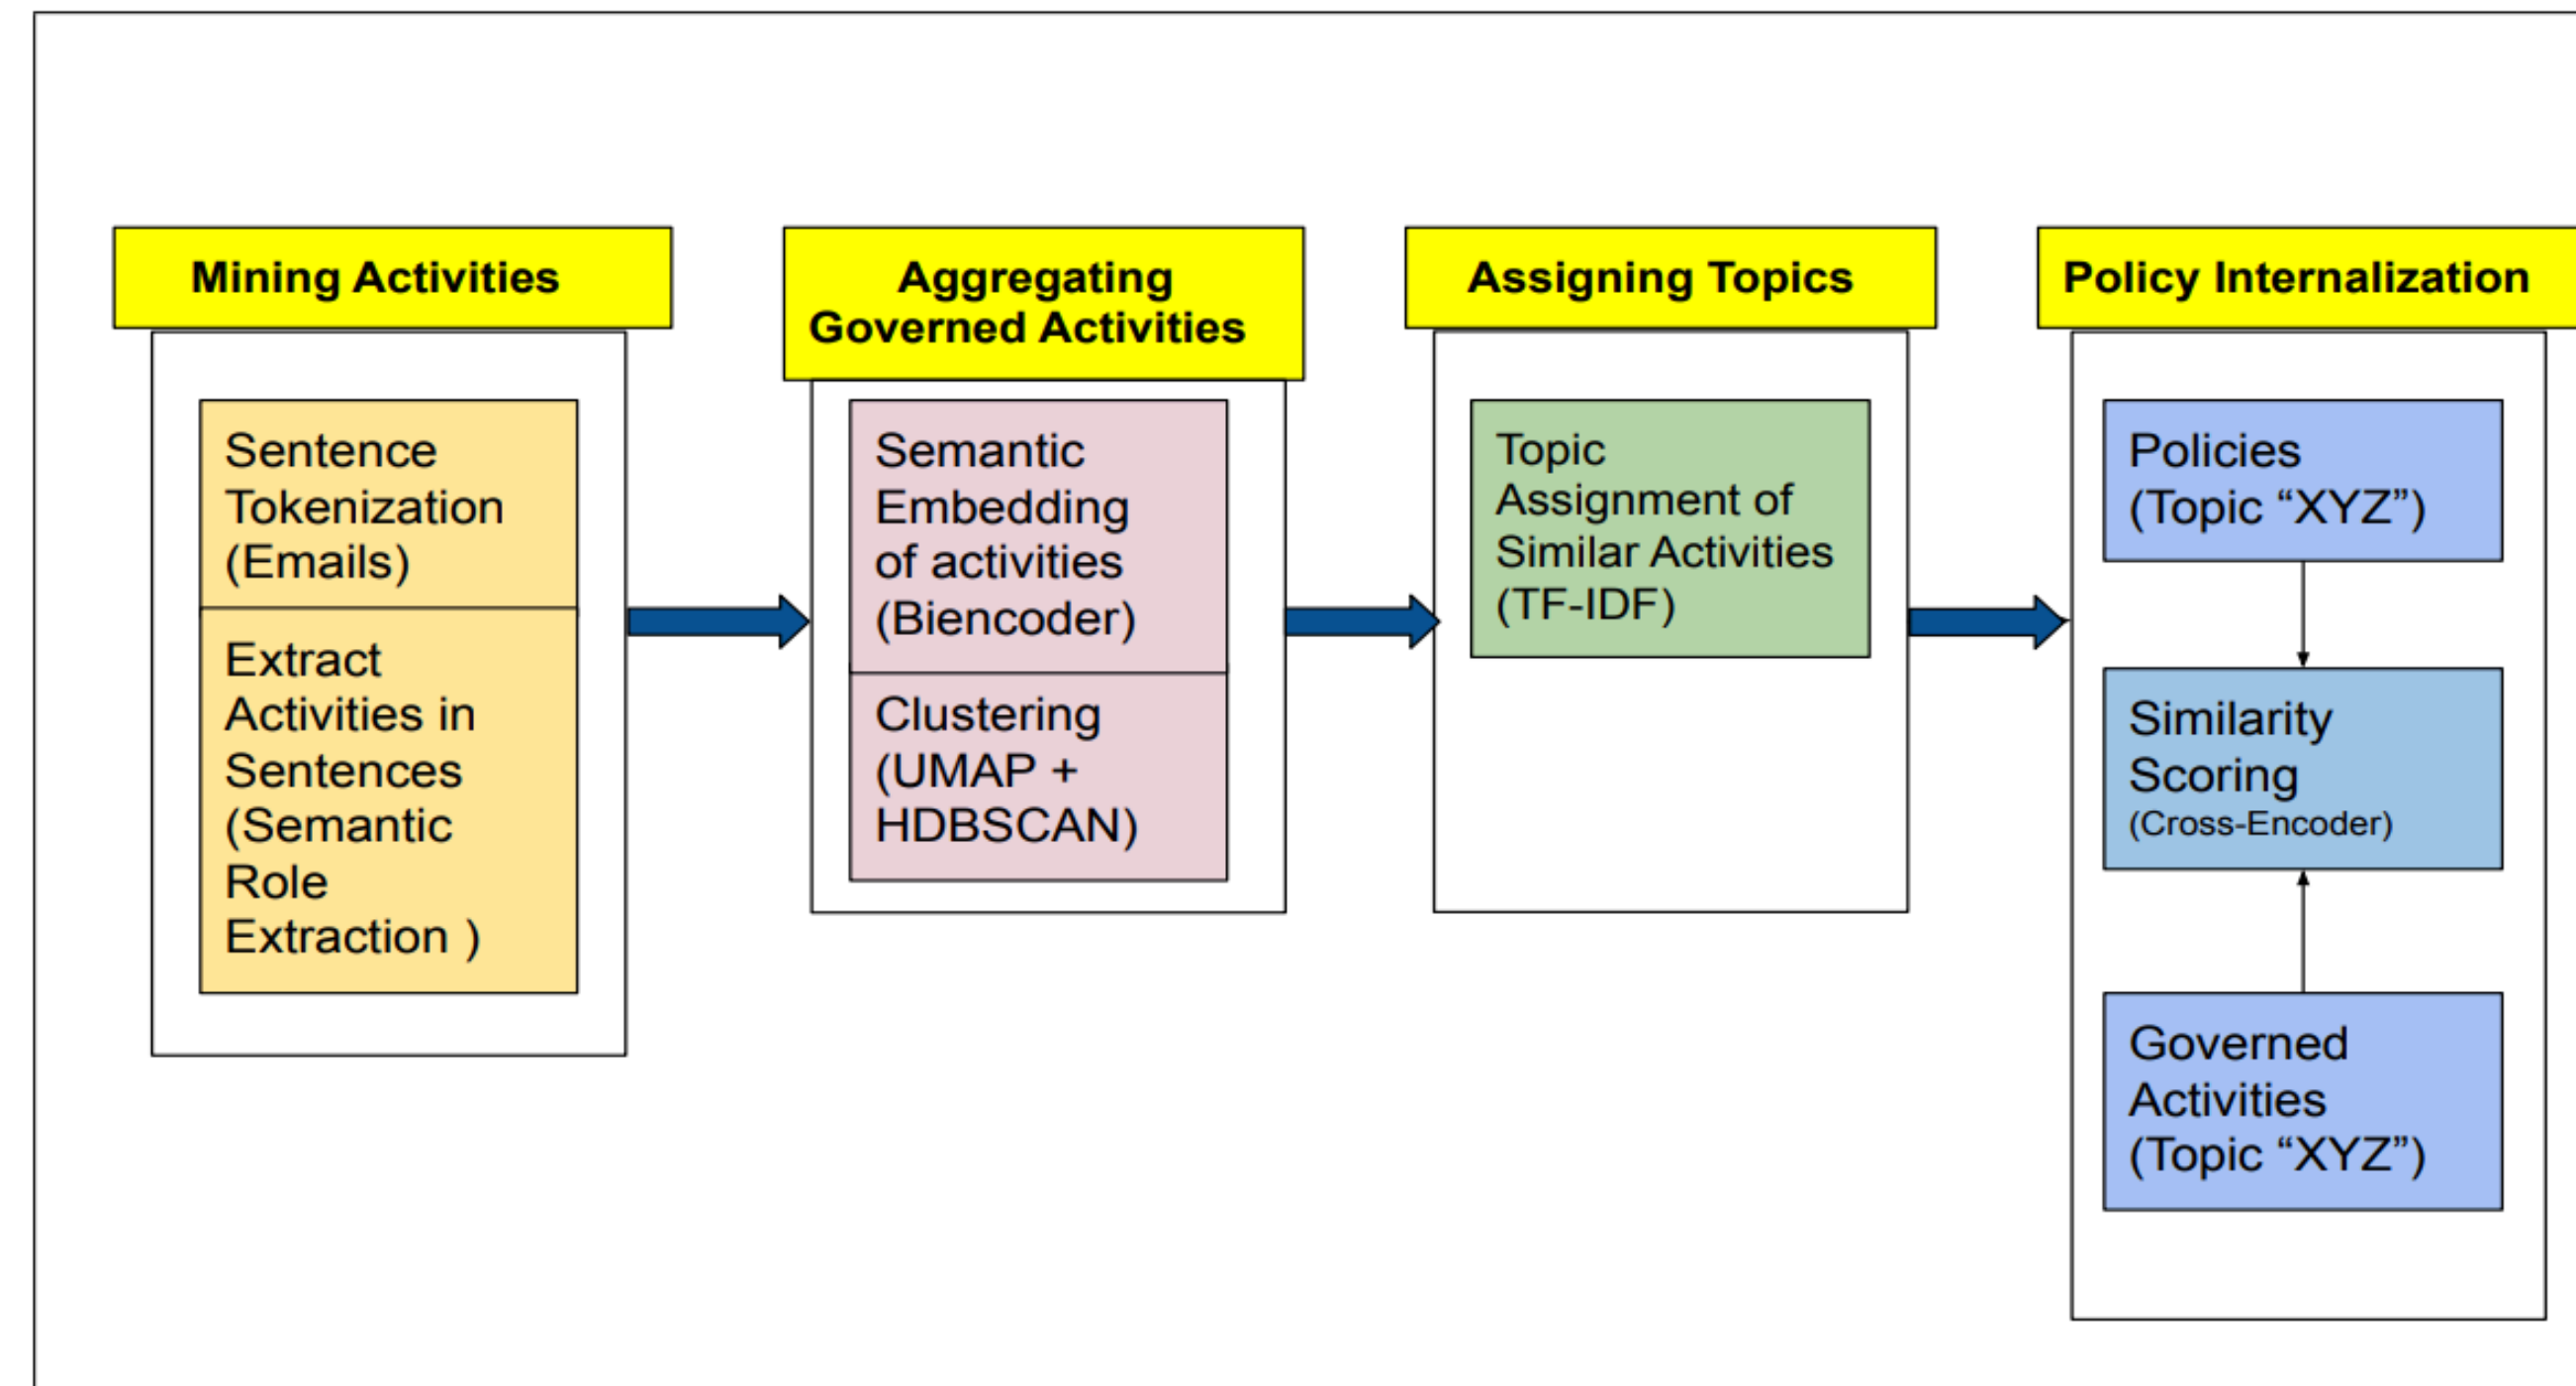

Figure 1: Language modeling pipeline for extracting activities, aggregating routine governed behavior, and evaluating internalization.

# What are the governed topics?

Chakraborti, M., Stănciulescu, S.  
Filkov, V., Frey, S. (in review) OSS  
Governance, Compliance, and  
Success: A Study of ASF Incubator  
Projects.

# Are more heavily governed topics discussed more or less?

Figure 2: Left: Distribution of ASF policy extent across governance topics. Right: Distribution of governed activity of projects across different governance topics. Governed activity was not found to be significantly correlated to policy extent.

Chakraborti, M., Stănciulescu, S.  
 Filkov, V., Frey, S. (in review) OSS  
 Governance, Compliance, and  
 Success: A Study of ASF Incubator  
 Projects.

# Is more policy associated with more internalization?

Figure 3: Left: Distribution of ASFI policy extent across governance topics. Right: Distribution of internalization scores within topics. Red and Green markers indicate the median and mean respectively. Internalization is observed to be higher in governance topics which are more regulated.

Chakraborti, M., Stănciulescu, S.  
Filkov, V., Frey, S. (in review) OSS  
Governance, Compliance, and  
Success: A Study of ASF Incubator  
Projects.

# Does practice or internalization influence outcomes?

Table 3: Summary RQ3: Binomial(Logit) GLM regression of project governance against Graduation/Retirement

| Predictor  | Covariates             |              | Covariates and Governed Activity |              | Covariates and Internalization |              | All                    |              |

 Governance, Compliance, and  
 Success: A Study of ASF Incubator  
 Projects.

# Conclusion

- Communities *do not run how they say they run*
- More policy making frame operations, but does not follow how extensively communities govern themselves.
- Successful projects tend to govern themselves along less formalized domains
- Should we run how we say we run?

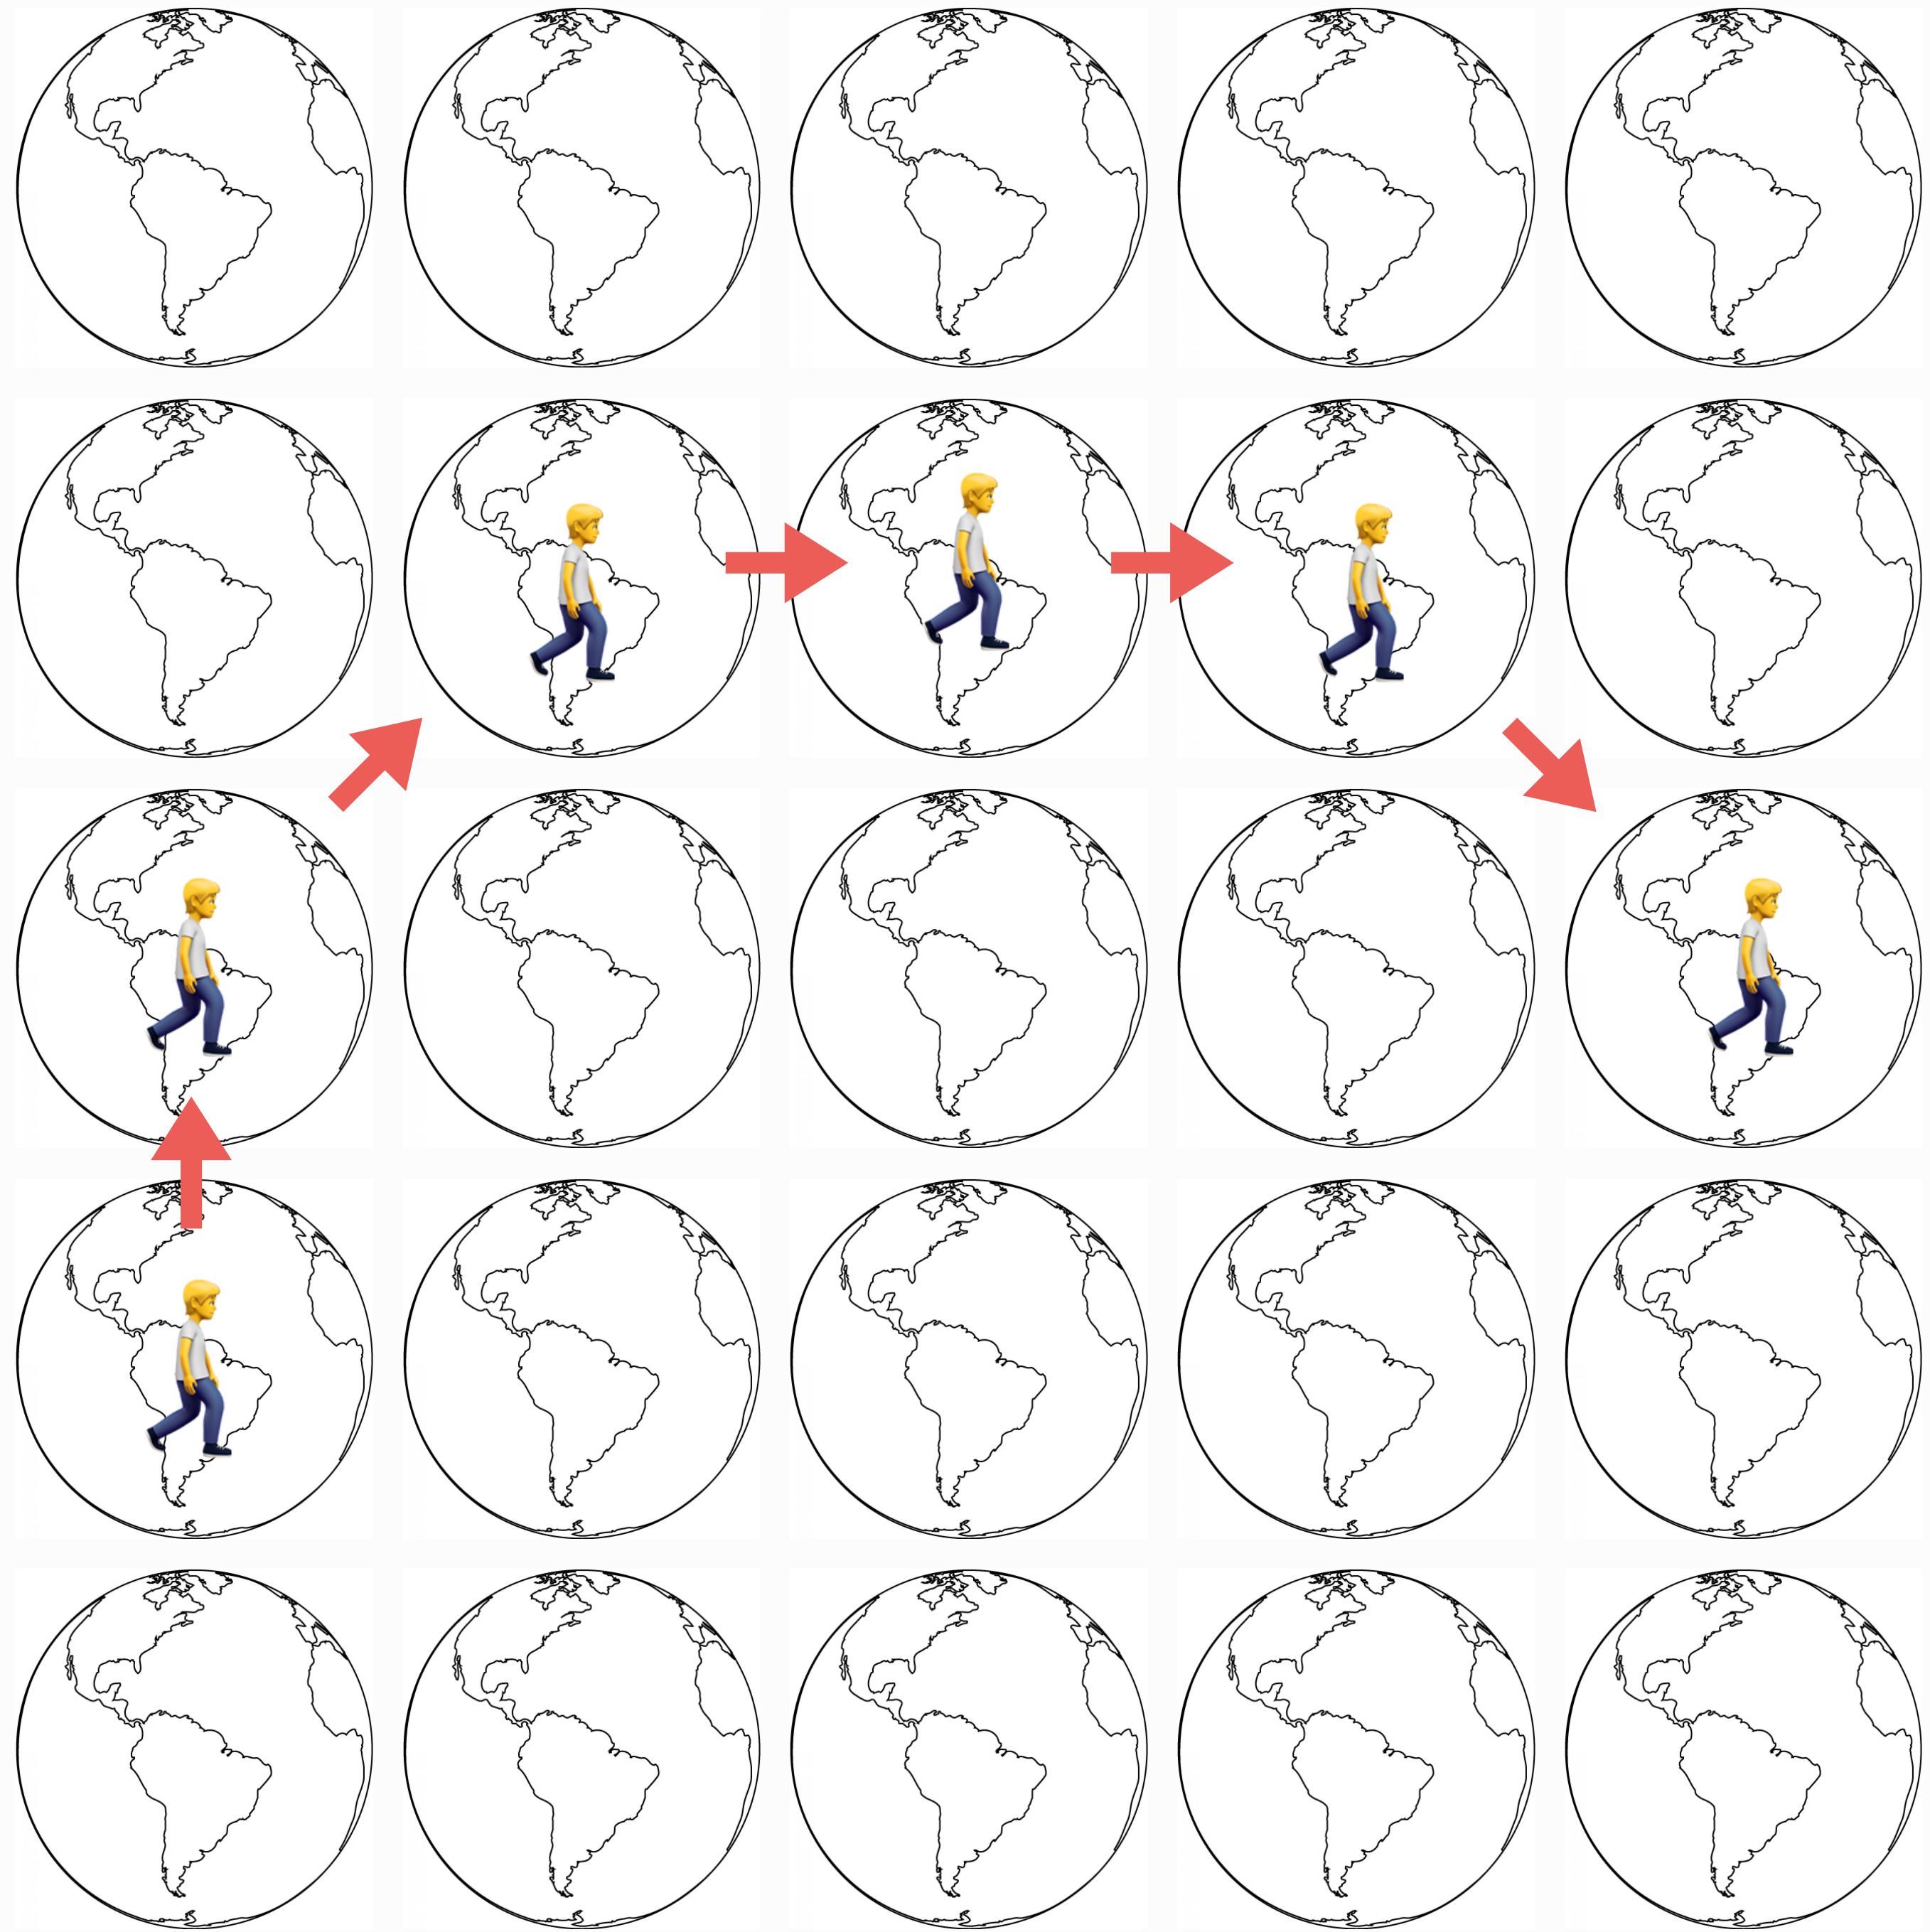

# Dynamics over games and institutional preferences

**Seth Frey**

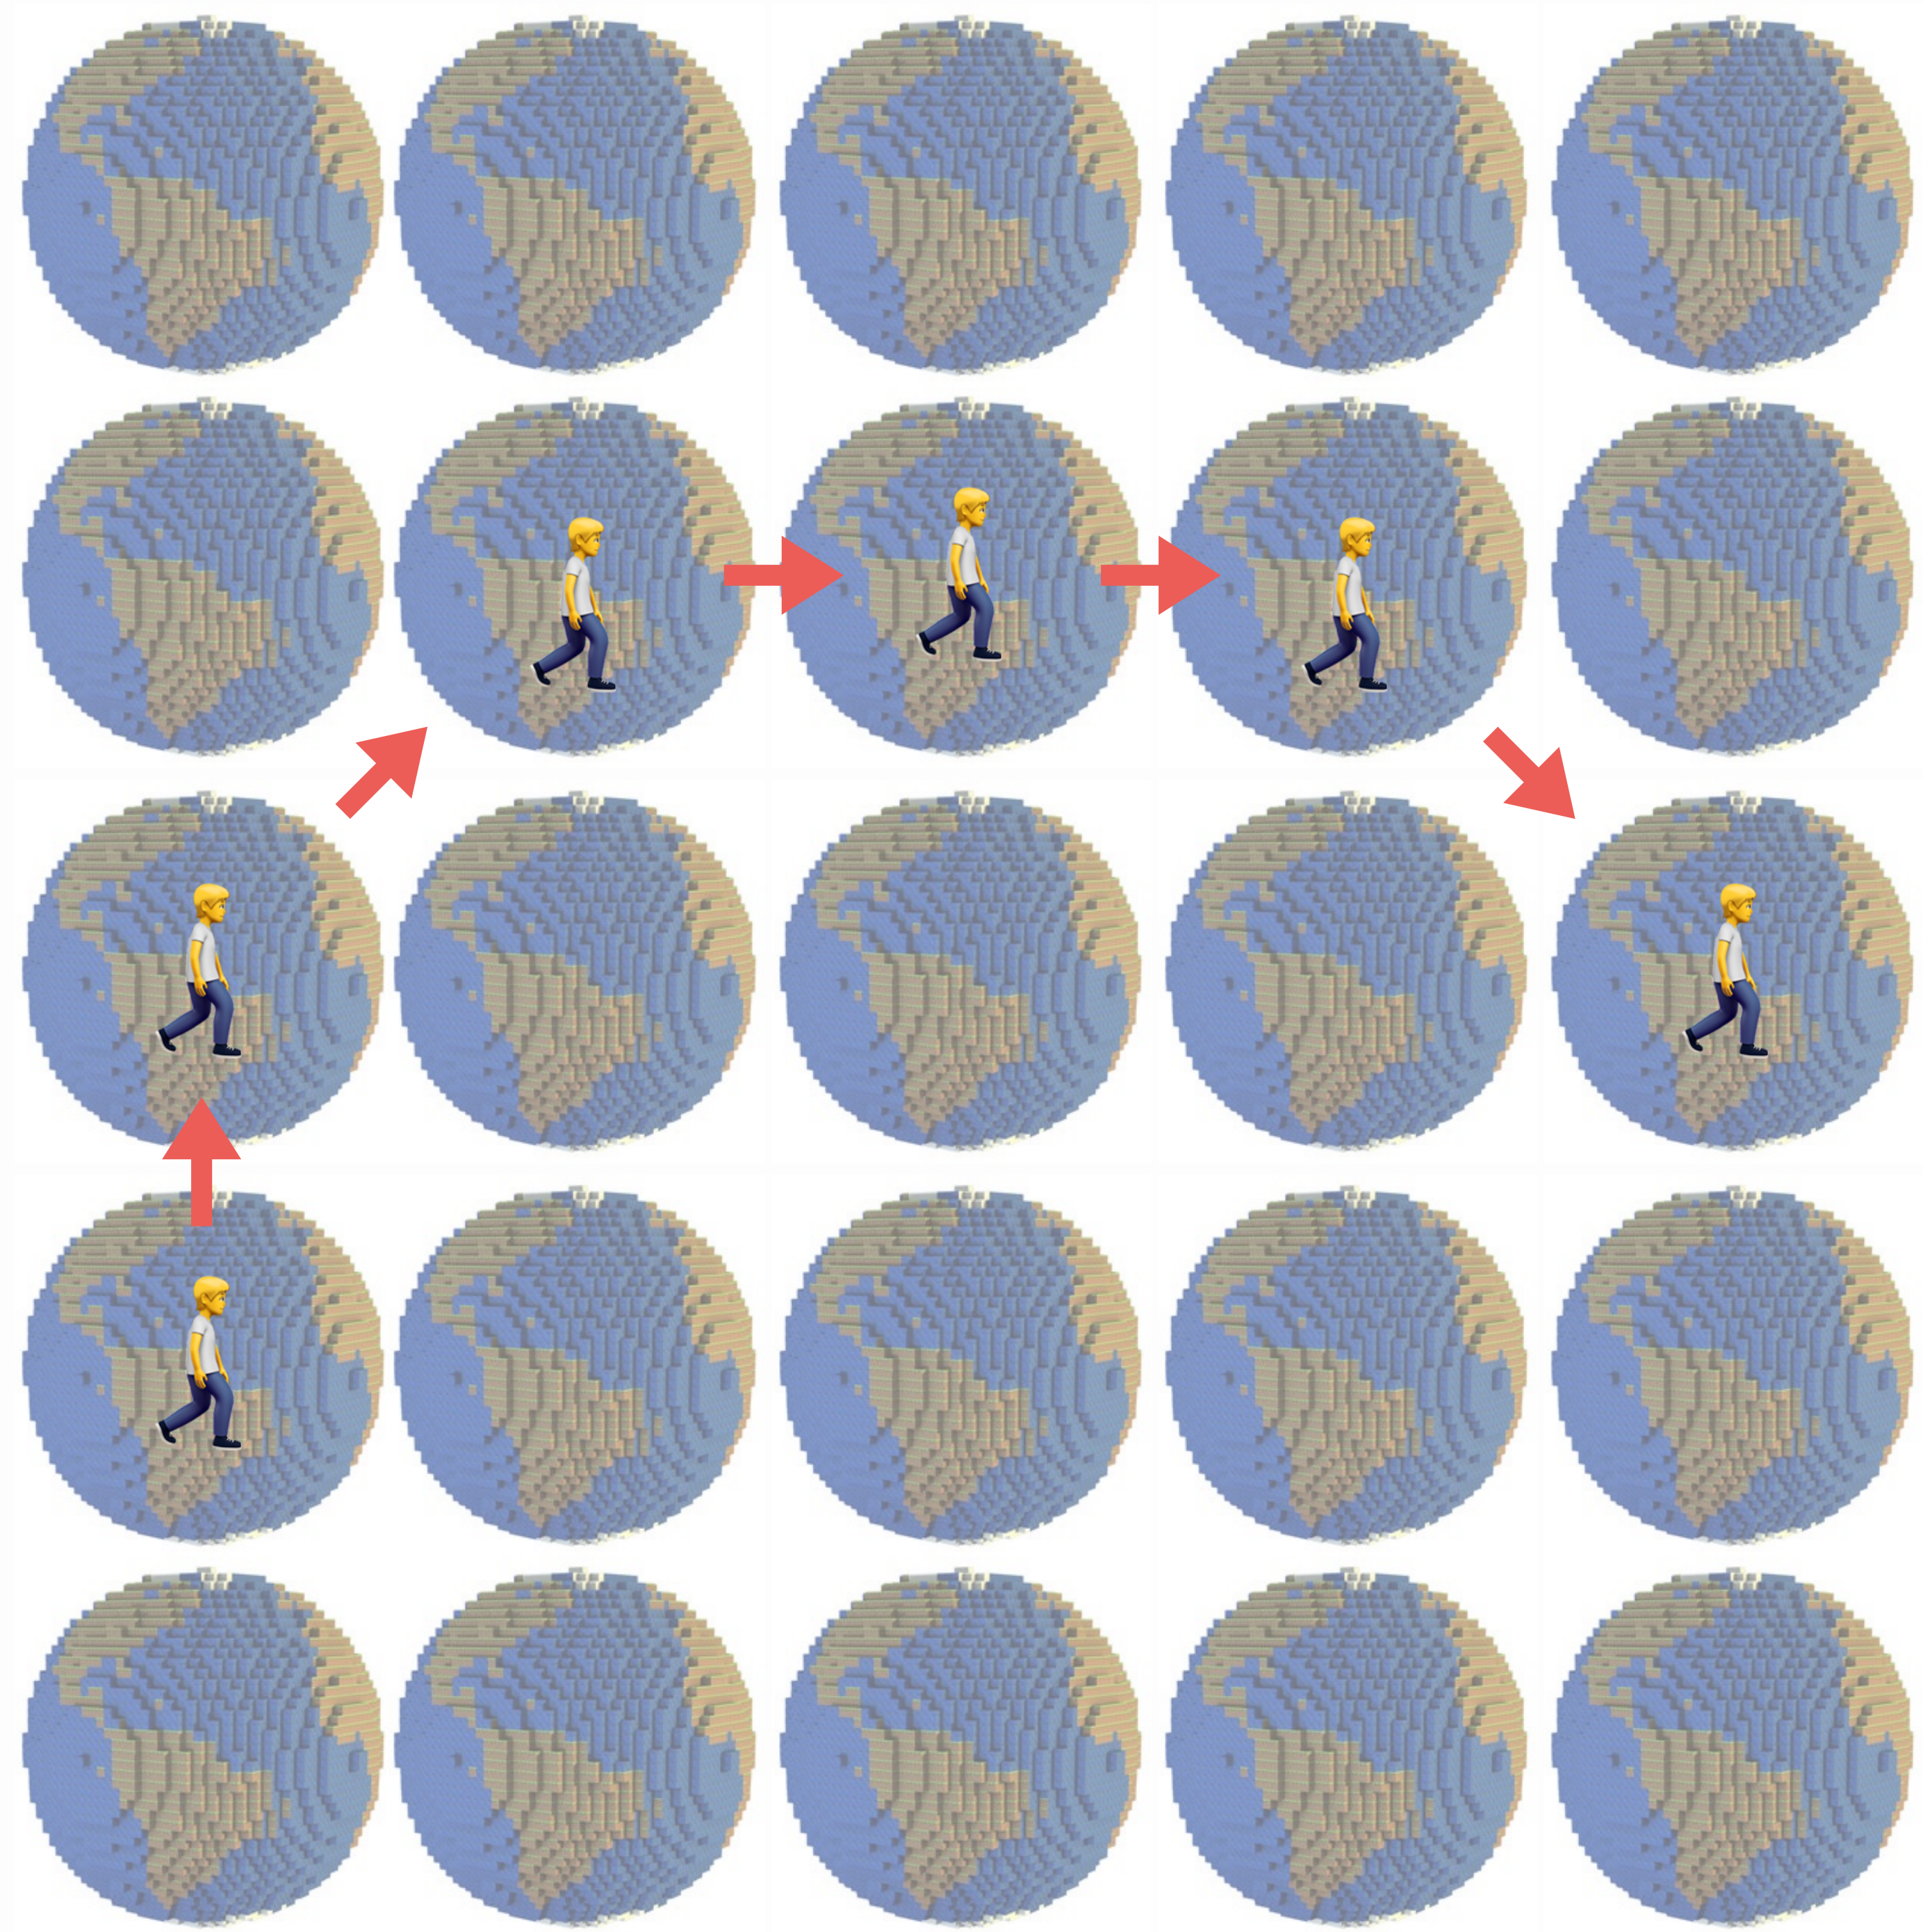

Communication, University of California, Davis

Frey, S. and Atkisson C. (2020) A dynamic over games drives selfish agents to win–win outcomes Proc. R. Soc. B.28720202630. <https://doi.org/fnq2>

# Simple dynamic

## Agent

- Compares all neighbors of a game based on its **features** as an institution
- Chooses preferred neighbor
- Repeats
- Converges on the end-product of institutional evolution

# Feature: Efficiency

|        | Left | Right |
|--------|------|-------|
| Top    | 2    | 0     |
| Bottom | 0    | 0     |

|        | Left | Right |
|--------|------|-------|
| Top    | 3    | 0     |
| Bottom | 0    | 0     |

# Feature: Stability

|        | Left | Right |
|--------|------|-------|
| Top    | 2    | 0     |
| Bottom | 0    | 0     |

|        | Left | Right |
|--------|------|-------|
| Top    | 2    | 0     |
| Bottom | 0    | 2     |

# Feature: Predictability

|        | Left | Right |
|--------|------|-------|
| Top    | 2    | 0     |
| Bottom | 0    | 0     |

|        | Left | Right |
|--------|------|-------|
| Top    | 4    | 0     |
| Bottom | 0    | 4     |

# Feature: Fairness

|        | Left | Right |
|--------|------|-------|
| Top    | 2    | 0     |
| Bottom | 0    | 0     |

|        | Left | Right |
|--------|------|-------|
| Top    | 2    | 0     |
| Bottom | 0    | 0     |

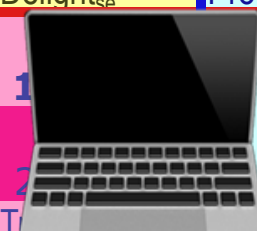

"Rational"  
within  
games  
and  
between  
them

# Simple dynamic

Agent compares all neighbors of a game:

- **Stability:** *Prefer games with unique Nash equilibrium*
- **Predictability:** *Prefer pure Nash equilibrium*
- **Efficiency:** *Prefer games with most profitable equilibrium*
- **Fair:** *Social preferences*

# Results

- Half of attractors are win-win
- Despite no sense of fairness
  - ... because of the nature of the space
- The attractors form a contiguous basin

# Results

**How does that scale?**

# Question

- What features do actual human beings favor in selecting between institutions?

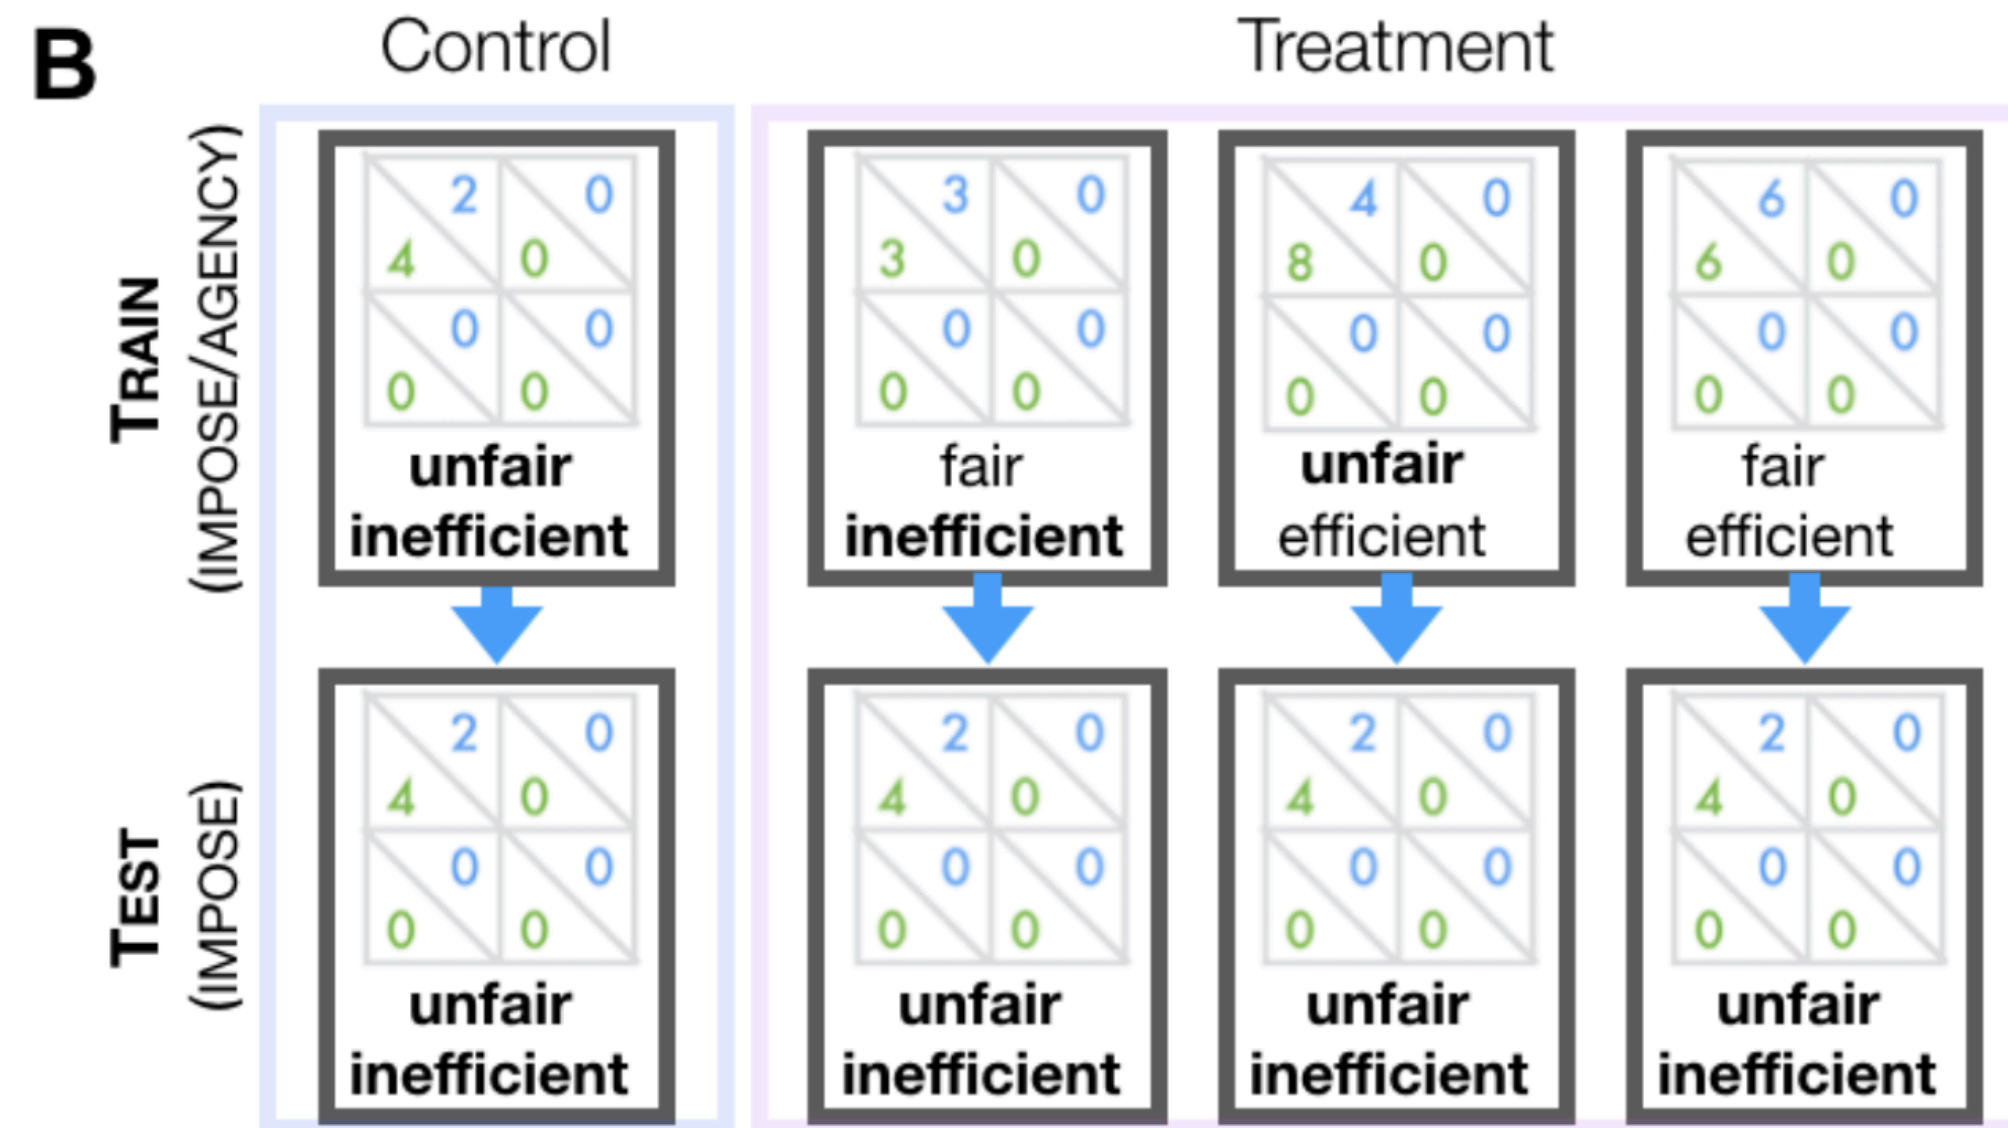

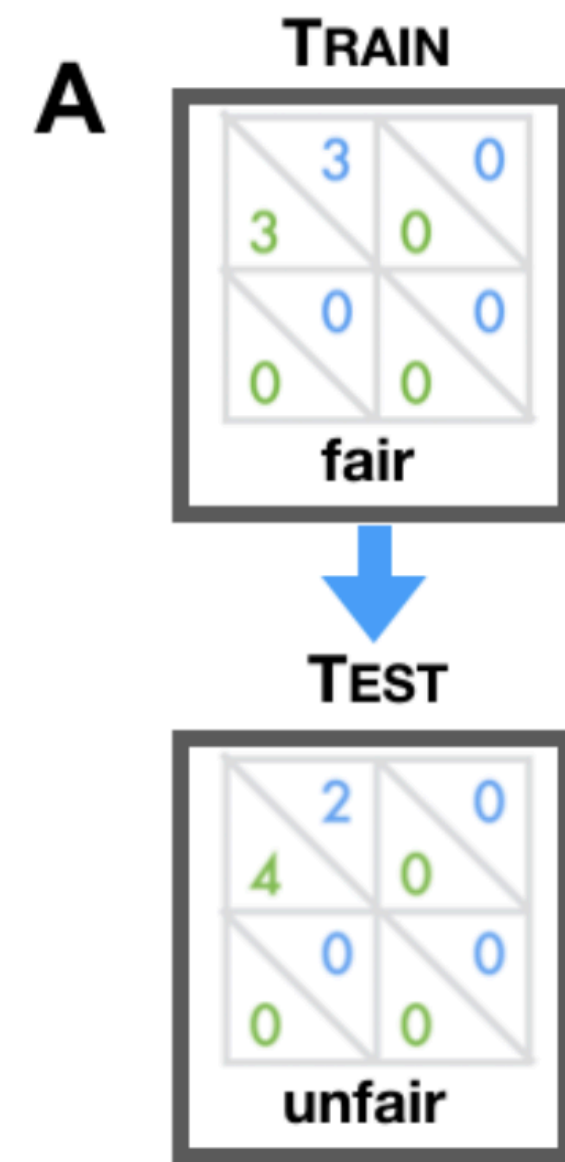

# Prediction

- In *Natural Justice* (2005), Ken Binmore distinguishes """"  
*... three levels of priority made necessary by an evolutionary approach to social contract theory. The three levels of priority are*
  - *Stability*
  - *Efficiency*
  - *Fairness*""""(p.5)

# Preliminary results

# Directions

- Among self-governing institutions, how should governance style change with the size?
- How do we model the effects of individuals on the cultural evolution of institutions?
- What do people look for when they browse for social systems for participate in?

# Example motivation: Institutional layering

- Institutions grow by incremental accretion
  - Deletions are rare
  - "Edits" are rare
  - Big changes are rare
- This "algorithm" will find optimal rule configurations if rules don't interact
- Our evidence for interactions suggests that layering is vulnerable to local minima

# Takeaway

Understanding institutional change as a dynamic *over* systems offers a powerful, general, and empirically testable framework for the study of cultural evolution.

# CAD for governance

- We can't yet formally represent real-world institutional complexity.
- We need it.
- Existing options fall short, including game theory.
- *What does an extended game theory look like?*

COMMISSION ON GOVERNMENT ADMINISTRATION  
 REPORT NO. 100-10  
 U.S. GOVERNMENT PRINTING OFFICE: 1977

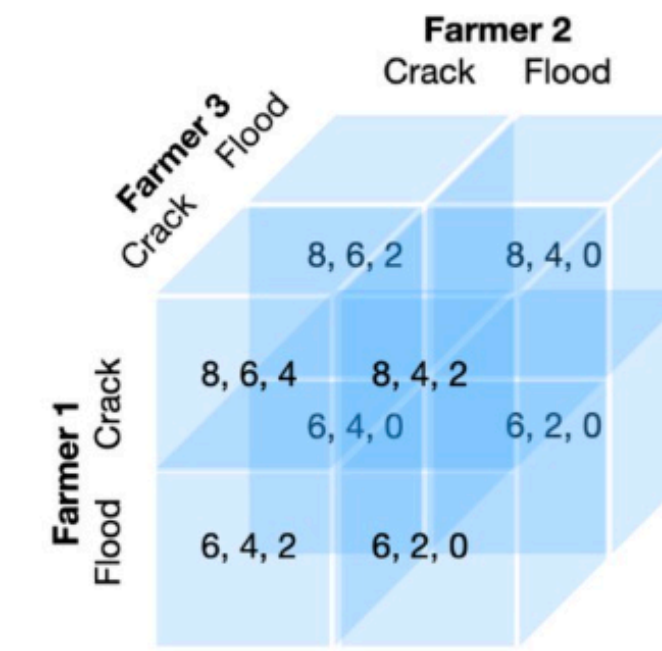

**Fig 3. A four stage CO<sub>2</sub> market game.** This multi-stage game proceeds through an initial allocation stage, a production stage, a resale stage, and a second production stage. The first models the primary allocation of CO<sub>2</sub> certificates to producers. Producers who received permits then decide how to use them in production. Afterwards, they either have unused permits left or are seeking further permits, and so participate in a resale market that is then followed by a final production phase. Producers operate under incomplete information: they do not know how highly others value their permits. With each stage represented as modules, stages like the production stage can be reused. The explicitly typed incoming (large left-pointing triangles) and outgoing arrows (terminating in circular nodes that represent the game's composability) make this complex of open games itself a game that could be opened and embedded within a larger game.
